

A vertical beam of light passes through a diamond-shaped prism. The prism is oriented with its point downwards. The light entering from the top is a bright white starburst, which becomes a sharp vertical line as it descends. Upon entering the prism, the light is refracted, creating a spectrum of colors: purple at the top, transitioning through yellow and green, and ending in a bright white and yellow glow at the bottom. Below the prism, the light continues as a thin vertical line that passes through a glowing, circular energy field or aura. This field is composed of intricate, swirling patterns of light in shades of blue, green, and yellow. At the very bottom of the beam, there is a small, glowing orange and red orb. The entire scene is set against a dark, starry background.
